Interactive Worked Examples (IWEs)

E.3 Determining the Number of Significant Figures in a Number

E.4 Significant Figures in Calculations

E.7 Unit Conversion

E.8 Unit Conversions Involving Units Raised to a Power

E.9 Density as a Conversion Factor

E.11 Problems with Equations

1.3 Atomic Numbers, Mass Numbers, and Isotope Symbols

1.4 Atomic Mass

1.7 The Mole Concept—Converting between Mass and Number of Atoms

1.8 The Mole Concept

2.2 Photon Energy

2.3 Wavelength, Energy, and Frequency

2.5 Quantum Numbers I

2.7 Wavelength of Light for a Transition in the Hydrogen Atom

3.4 Writing Electron Configurations from the Periodic Table

3.6 Atomic Size

3.7 Electron Configurations and Magnetic Properties for Ions

3.9 First Ionization Energy

4.3 Writing Formulas for Ionic Compounds

4.10 The Mole Concept—Converting between Mass and Number of Molecules

4.13 Chemical Formulas as Conversion Factors

4.15 Obtaining an Empirical Formula from Experimental Data

4.18 Obtaining an Empirical Formula from Combustion Analysis

5.2 Writing Lewis Structures

5.4 Writing Lewis Structures for Polyatomic Ions

5.5 Writing Resonance Structures

5.6 Assigning Formal Charges

5.8 Writing Lewis Structures for Compounds Having Expanded Octets

5.10 Predicting Molecular Geometries

5.12 Predicting the Shape of Larger Molecules

5.13 Determining If a Molecule Is Polar

6.3 Hybridization and Bonding Scheme

6.5 Molecular Orbital Theory

7.2 Balancing Chemical Equations

7.4 Stoichiometry

7.6 Limiting Reactant and Theoretical Yield

8.1 Calculating Solution Concentration

8.2 Using Molarity in Calculations

8.4 Solution Stoichiometry

8.6 Writing Equations for Precipitation Reactions

9.2 Temperature Changes and Heat Capacity

9.3 Thermal Energy Transfer

9.5 Measuring ΔE_{rxn} in a Bomb Calorimeter

9.7 Stoichiometry Involving ΔH

9.8 Measuring ΔH_{rxn} in a Coffee-Cup Calorimeter

9.10 Calculating ΔH_{rxn} from Bond Energies

9.12 $\Delta H^{\circ}_{\text{rxn}}$ and Standard Enthalpies of Formation

10.5 Ideal Gas Law I

10.7 Density of a Gas

10.8 Molar Mass of a Gas

10.13 Graham's Law of Effusion

10.14 Gases in Chemical Reactions

11.1 Dipole–Dipole Forces

11.2 Hydrogen Bonding

11.3 Using the Heat of Vaporization in Calculations

11.5 Using the Two-Point Form of the Clausius–Clapeyron Equation to Predict the Vapor Pressure at a Given Temperature

11.6 Navigation within a Phase Diagram

12.4 Relating Density to Crystal Structure

13.3 Using Parts by Mass in Calculations

13.4 Calculating Concentrations

13.5 Converting between Concentration Units

13.6 Calculating the Vapor Pressure of a Solution Containing a Nonvolatile Nonelectrolyte Solute

13.9 Boiling Point Elevation

14.2 Determining the Order and Rate Constant of a Reaction

14.4 The First-Order Integrated Rate Law: Determining the Concentration of a Reactant at a Given Time

14.8 Using the Two-Point Form of the Arrhenius Equation

14.9 Reaction Mechanisms

15.1 Expressing Equilibrium Constants for Chemical Equations

15.5 Finding Equilibrium Constants from Experimental Concentration Measurements

15.8 Finding Equilibrium Concentrations When You Know the Equilibrium Constant and All but One of the Equilibrium Concentrations of the Reactants and Products

15.9 Finding Equilibrium Concentrations from Initial Concentrations and the Equilibrium Constant

15.12 Finding Equilibrium Concentrations from Initial Concentrations in Cases with a Small Equilibrium Constant

15.14 The Effect of a Concentration Change on Equilibrium

16.1 Identifying Brønsted–Lowry Acids and Bases and Their Conjugates

16.3 Calculating pH from $\left[H_3O^+\right]$ or $\left[OH^-\right]$

16.5 Finding the $\left[H_3O^+\right]$ of a Weak Acid Solution

16.7 Finding the pH of a Weak Acid Solution in Cases Where the *x is small* Approximation Does Not Work

16.8 Finding the Equilibrium Constant from pH

16.9 Finding the Percent Ionization of a Weak Acid

16.12 Finding the $\left[OH^-\right]$ and pH of a Weak Base Solution

16.14 Finding the pH of a Solution Containing an Anion Acting as a Base

17.2 Calculating the pH of a Buffer Solution as an Equilibrium Problem and with the Henderson–Hasselbalch Equation

17.3 Calculating the pH Change in a Buffer Solution after the Addition of a Small Amount of Strong Acid or Base

17.4 Using the Henderson–Hasselbalch Equation to Calculate the pH of a Buffer Solution Composed of a Weak Base and Its Conjugate Acid

17.6 Strong Base–Strong Acid Titration pH Curve

17.7 Weak Acid–Strong Base Titration pH Curve

17.8 Calculating Molar Solubility from K_{sp}

18.4 Calculating Gibbs Free Energy Changes and Predicting Spontaneity from ΔH and ΔS

18.5 Calculating Standard Entropy Changes (ΔS°_{rxn})

18.6 Calculating the Standard Change in Free Energy for a Reaction Using $\Delta G^\circ_{rxn} = \Delta H^\circ_{rxn} - T\Delta S^\circ_{rxn}$

18.10 Calculating ΔG_{rxn} under Nonstandard Conditions

18.11 The Equilibrium Constant and ΔG°_{rxn}

19.2 Half-Reaction Method of Balancing Aqueous Redox Equations in Acidic Solution

19.3 Balancing Redox Reactions Occurring in Basic Solution

19.4 Calculating Standard Potentials for Electrochemical Cells from Standard Electrode Potentials of the Half-Reactions

19.6 Relating ΔG° and E°_{cell}

20.4 Radioactive Decay Kinetics

20.5 Using Radiocarbon Dating to Estimate Age

21.3 Naming Alkanes

Key Concept Videos (KCVs)

E.8 Solving Chemical Problems

E.8 Solving Chemical Problems

1.1 Structure Determines Properties

1.2 Classifying Matter

1.5 Atomic Theory

1.8 Subatomic Particles and Isotope Symbols

1.10 The Mole Concept

2.2 The Nature of Light

2.4 The Wave Nature of Matter

2.5 Quantum Mechanics and the Atom: Orbitals and Quantum Numbers

3.3 Electron Configurations

3.4 Writing an Electron Configuration Based on an Element's Position on the Periodic Table

3.6 Periodic Trends in the Size of Atoms and Effective Nuclear Charge

4.4 The Lewis Model for Chemical Bonding

4.6 Naming Ionic Compounds

4.8 Naming Molecular Compounds

5.3 Writing Lewis Structures for Molecular Compounds

5.4 Resonance and Formal Charge

5.7 VSEPR Theory

5.8 VSEPR Theory: The Effect of Lone Pairs

6.2 Valence Bond Theory

6.3 Valence Bond Theory: Hybridization

7.3 Writing and Balancing Chemical Equations

7.4 Reaction Stoichiometry

7.5 Limiting Reactant, Theoretical Yield, and Percent Yield

8.5 Reactions in Solution

9.3 The First Law of Thermodynamics

9.4 Heat Capacity

9.6 The Change in Enthalpy for a Chemical Reaction

10.2 Kinetic Molecular Theory

10.4 Simple Gas Laws and Ideal Gas Law

10.5 Simple Gas Laws and Ideal Gas Law

10.7 Mixtures of Gases and Partial Pressures

11.3 Intermolecular Forces

11.5 Vaporization and Vapor Pressure

11.7 Heating Curve for Water

11.8 Phase Diagrams

12.3 Unit Cells: Simple Cubic, Body-Centered Cubic, and Face-Centered Cubic

13.4 Solution Equilibrium and the Factors Affecting Solubility

13.5 Solution Concentration: Molarity, Molality, Parts by Mass and Volume, Mole Fraction

13.6 Colligative Properties

14.4 The Rate Law for a Chemical Reaction

14.5 The Integrated Rate Law

14.6 The Effect of Temperature on Reaction Rate

15.3 The Equilibrium Constant

15.8 Finding Equilibrium Concentrations from Initial Concentrations

15.9 Le Châtelier's Principle

16.3 Definitions of Acids and Bases

16.7 Finding the $[H_3O]$ and pH of Strong and Weak Acid Solutions

16.9 The Acid–Base Properties of Ions and Salts

17.2 Buffers

17.2 Finding pH and pH Changes in Buffer Solutions

17.4 The Titration of a Weak Acid and a Strong Base

18.3 Entropy and the Second Law of Thermodynamics

18.4 Standard Molar Entropies

18.6 The Effect of ΔH, ΔS, and T on Reaction Spontaneity

19.4 Standard Electrode Potentials

19.5 Cell Potential, Free Energy, and the Equilibrium Constant

20.3 Types of Radioactivity
